

Is The Virtual Tool Available In cPanel

This article is for [cPanel](#) Accounts. Determine where your account is with [this guide](#).

The Virtual() tool is **not** available in PHP on cPanel since it is not installed as a module on cPanel accounts.

If you need control over how PHP is compiled for your account, please consider our Cloud Reseller package, which grants you root access to manage configurations such as this. See packages [here](#).
