

# How To Configure The Spam Filtering Control Panel

See [How to get the Spam Filtering Control Panel](#).

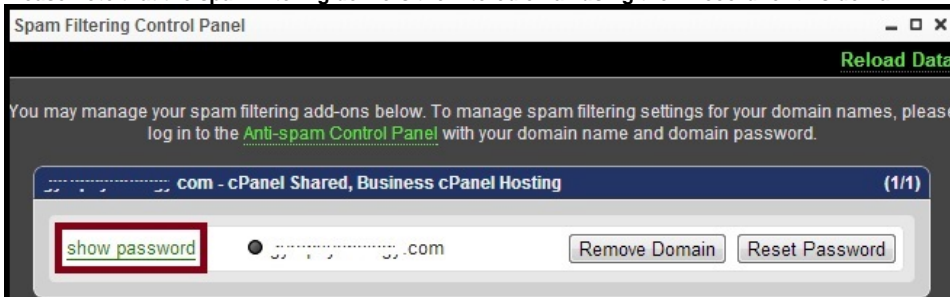

Once you are able to see the Spam Filtering Control Panel icon on the Manage toolbar in your <https://cp.westhost.com/> account, you can begin to configure your new spam filtering tool.

## To Configure:

1. Click on the icon.

2. Click on Add Domain.
3. Enter the domain name that will have spam filtered.
4. **Please note that you will need to update the MX record for this domain.** Otherwise spam filtering will not work.
5. Update your MX to [mx.mailfiltering.com](https://mx.mailfiltering.com). See the [MX Entry guide here](#).
6. Once MX Records are updated, allow 2 - 24 hours for propagation to take place.
7. Click on "Show Password" to display your login details for the Anti-Spam Control Panel.
8. **Please note that the spam filtering delivers the filtered email using the A record for this domain.**

9. Click the "Anti-Spam Control Panel" link above your domain name.

10. Connect to your dashboard with the domain name and associated password.
