

What Is A Perl Module

This article is for cPanel Accounts. Determine where your account is with [this guide](#).

Log into cPanel main page Installed Perl Modules Click to View Under General server information: Installed Perl Modules. If there is a script you wish to install, it can be done by contacting our support team.

You can check what Perl Modules are currently available by running the shell command

```
| instmodsh
```

and hitting "l" to list the modules.
