

# Is PHP Compiled With enable-calendar By Default

*This article is for cPanel Accounts. Determine where your account is with [this guide](#).*

Yes, WestHost shared servers should have PHP compiled with --enable-calendar by default.

If you are not sure and would like to check, run the following command in your account via SSH:

```
| #php -i | grep calendar
```

There will be a paragraph of output, but look for --enable-calendar to verify it is there.
