

How To Register An Additional Domain Name

This article is for cPanel Accounts. Determine where your account is with [this guide](#).

If you are an existing WestHost client, please register new domain names through <https://cp.westhost.com/> under Domain Names on the "Order Additional Domain Names" tab.

By default new domain registrations will be pointed to the cPanel shared hosting name servers ns1.westservers.net and ns2.westservers.net.

If you want to use this domain with an existing hosting service you need to add it through cPanel >> Addon Domains to activate it with a hosting location.
