How To Add - Remove WHOIS Privacy Protection For A Domain

This article is for cPanel Accounts. Determine where your account is with [this guide](#).

Follow the steps below to add/remove WHOIS Privacy Protection:

1. Click on the icon "Domain Names"
2. Highlight the domain name
3. Click on "Domain WHOIS Privacy"

If the domain name does not have WHOIS privacy protection, it will display the link "Click here to enable"

If the domain name already has WHOIS privacy protection, and you would like it removed please contact our billing department.
