

# How To Access Webmail

*This article is for cPanel Accounts. Determine where your account is with [this guide](#).*

Webmail allows you to access your email accounts through a browser such as Firefox, Internet Explorer, or Safari. You can easily access your email account from any computer with an Internet connection and a web browser.

To use webmail:

1. Connect to your cPanel >> Email Accounts page.
2. Click More >> Access Webmail.
3. Select the webmail application through which you wish to access your email.
  - Click *Enable AutoLoad* to cause the webmail application to load by itself the next time you access this page.
4. Complete the fields on the following page to access your webmail.

The email account will be opened through your browser. The webmail client will then retrieve all read and unread messages associated with your email account.

You may also log into webmail without accessing cPanel by entering `https://example.com:2096` into your web browser, where your [domain](#) name would be entered in place of `example.com`. Once you provide your username and password, you will be able to select a webmail client.
