

# How To Configure A WordPress Domain For Westhost

*In order to configure your domain to work with your new WestHost WordPress hosting, you will need to login to your registrar's control panel and to change the nameservers to:*

[dns1.westhost.com](https://dns1.westhost.com)

[dns2.westhost.com](https://dns2.westhost.com)

[dns3.westhost.com](https://dns3.westhost.com)

*If you need an SSL certificate, you can order an SSL certificate through your CHI control panel. The steps for this can be found [here](#).*
