

What Is Uebimiau

Uebimiau is a simple, yet efficient cross-platform POP3/IMAP mail reader written in PHP. It has many features, such as: Folders, View and Send Attachments, Preferences, Search, Quota Limit, etc.

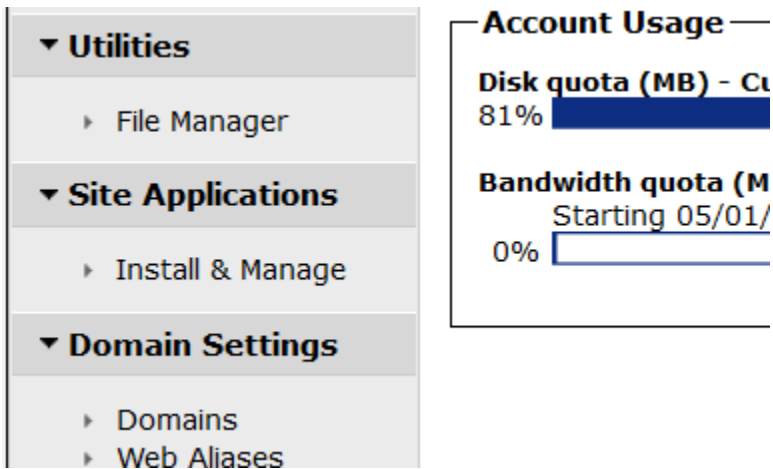

Installing Uebimiau

For installation instructions, please [click here](#).

Accessing Uebimiau Once Installed

Log into Site Manager at <https://domain.com/manager/> with your username and password.

Click "Install & Manage" from the menu located on the left-hand side of your screen.

The screenshot shows a web interface with a left-hand navigation menu and a main content area. The menu is expanded to show three categories: Utilities, Site Applications, and Domain Settings. Under Site Applications, 'Install & Manage' is selected. The main content area displays 'Account Usage' with two progress bars: 'Disk quota (MB) - Cu' at 81% and 'Bandwidth quota (M' at 0%. The bandwidth quota bar also shows 'Starting 05/01/'.

Click the information "i" icon next to the application.

E-mail		[Expand]
Dada Mail 4.0.4	 	
Dovecot IMAP Server 1.1.7

Using Uebimiau

If you have questions about Uebimiau and its use, we would recommend you refer to help resources at <http://www.uebimiau.org/>.

We want to make sure that your experience with us is as good as it possibly can be. With that in mind, we hope you understand that we also have limitations in resources that prevents us from being able to support third party software (as complex as this) as well as you may need it to be. This is why we ask you to use the above reference for troubleshooting any problems you may have and then, if appropriate, contact us for help in fixing the problem.
