

How To Use And Apply Themes In WordPress

This article will walk you through the steps necessary to apply themes to your WestHost WordPress account.

Once you are logged into your WordPress admin area, to manage your themes and apply new ones you will need to hover your mouse over the “Appearance” option to see the menu.

From there, you can select a theme or install a new theme from the list by selecting “Add New Theme”.

Once the theme has been installed, you can configure it to your liking.

Unfortunately, because each theme has different configuration options, we cannot explain them all in one post. If you have questions about different options for a particular theme, you will need to look in the theme options for the creator of the theme and contact them directly.
