

# How To Connect Email Accounts To A Mail Client

This article is for cPanel Accounts. Determine where your account is with [this guide](#).

You can find the details needed to set up your email accounts in [cPanel >> Mail Accounts](#). Next to the e-mail address you want to set up, click the "More" button. From there click on the "Configure Mail Client" option.

If you use Outlook 2010, there is a [more detailed guide here](#).

If you use Mac Mail, see the [guide here](#).

If you want to retrieve e-mail with your Gmail account, [see this guide](#).

you will need to configure the mail client manually.

Here are the manual generic setup instructions.

**Mail Server Username:** user+yourdomain.com (because of how cPanel is configured, user@domain.com will ALSO work for your connection, in almost all cases)

**Incoming Mail Server:** mail.yourdomain.com

**Incoming Mail Server:** (SSL) sl-507-#.slc.westdc.net [*Your server number*]

**Outgoing Mail Server:** mail.yourdomain.com (*server requires authentication*)**port 2525**

**Outgoing Mail Server:** (SSL) sl-507-#.slc.westdc.net (*server requires authentication*)**port 465**

**Supported Incoming Mail Protocols:** POP3, POP3S (SSL/TLS), IMAP, IMAPS (SSL/TLS)

**Supported Outgoing Mail Protocols:** SMTP, SMTPS (SSL/TLS)

If you have issues configuring your e-mail client to connect to a user account, please ensure that these settings are correct and that you are using the correct password for the account. After that has been reviewed please contact Tech Support for further assistance.
